

We are currently using Inspection Manager to complete and send inspection reports to property owners and tenants. In order to successfully send out emails directly from the Inspection Manager system, the following entries need to be added to our SPF records for our domain:

a:spf.inspectionmanager.com

a:spf.propertyspace.com

(Do not use INCLUDE. It must be a:spf.inspectionmanager.com and a:spf.propertyspace.com)

You must ensure that the type is TXT when adding records to the DNS. If there are no existing SPF records in the DNS there is no need to add these SPF records.

These records are a requirement before Inspection Manager can activate a new feature for use.

Please email helpdesk@inspectionmanager.com with the office name and a confirmation that the record has been added once this has been completed.
